Retractable Belt Barriers

Retractable belt barriers are a brilliant solution for managing queues and the flow of visitors of pedestrians.

We stock three types of belt barriers which are distinguished by the variance in base. The barrier stanchions are all manufactured from a coated steel, stand at around 1 m tall to act as visible and physical aid for guiding visitors/pedestrians.

All of the barriers feature a discreet locking mechanism which prevents them being easily removed. They also feature a brake system which ensures the slow retraction of the belt if unexpectedly released.

These are easily assembled and can be neatly stowed away when not in use.

There are four connectors on these which allows for multi-direction queues.

Size and dimensions

| Barrier name | Belt length | Belt width | Total length | Total height |
|--------------|-------------|------------|--------------|--------------|
| Standard | 3.4 m | 50 mm* | 3.7 m | 1020 mm |
| Premium | 3.4 m | 50 mm | 3.7 m | 1000 mm |
| Stackable | 2950 mm | 50 mm | 3 m | 920 mm |

The stackable belt barriers feature a u-shaped slot so that they can be stacked upright when not in use.

Whilst all our barriers are built to a high standard the base for our premium model is manufactured from a cast iron.

Key Features

- > 4-way belt connection for flexible use
- > Discreet belt lock
- > Slow retracting brake system
- > Ease of installation
- > Easy to handle, transport and store
- > Matt, jet black professional finish
- > Padding on underside of base for contact protection
- > Can be linked to multiple barriers for extended length
- > Total barrier weight is just 9kg

All our barriers include padding on the underside of the base. Our standard barrier features a rubber ring around the circumference of the base for extra protection.

Lockable belts with a brake system
