

WONDERWALL BARRIER INSTALLATION GUIDE

When excavation protection and street works demand additional strength and endurance, SafeSite WonderWall Barriers offer the optimum system.

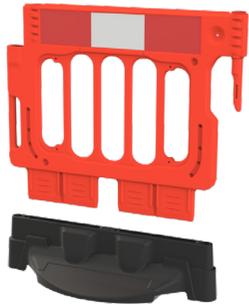

People to Install:

Equipment / Accessories Needed:

No accessories are required

1

Where possible, make sure the WonderWall is placed on even ground. Align the top section of the barrier with the base and slot in until secure.

2

Line the second barrier up with the first. Tilt at an angle. Allow the prong on the end to slot into the hole on the barrier on the ground. Once the connection is made, slot the bottom of the barrier into the base.

3

The image above shows how the barriers should look when installed.

4

You can increase the overall height of the barrier with an extension. To install the fence extension, line up the bars at the bottom of the fence with the holes on the top of the WonderWall barrier. Slot into place until secure.

5

Repeats steps, 2, 3 and 4 until the desired length is achieved.

6

The WonderWall barrier can be linked to other types of barrier, such as the Gate Barrier. Simply drop the prong into the connection loop of the connecting barrier.

Useful Tip: Mini Double Top fence panel is available and can be used if a Double Top is too large for the required construction project.

Wear the appropriate PPE for this task.
