FACILITIES

LowPro Trench Cover 12x8

The 12/8 Safe Cover is a versatile, rigid and lightweight trench cover that is suitable for pedestrians and 2 tonne vehicles over a 700mm trench.

It offers an alternative to traditional steel plates and plywood boards but is not designed to be used in the roadway.

The covers can be quickly installed, and the black rubber edges grip the asphalt – negating the need for bolts. The LowPro 12/8 trench cover measures 1.2m x 0.8m and can be connected to additional LowPro covers using the infill strips.

Can use Infill strips between trench covers for connecting a seamless path

Can create temporary or semi-permanent road covers

Key Features

- Easy to use, install and transport
- Covers trenches up to 700mm wide
- Anti slip with groups moulded to surface
- Adapt and customise cover with corporate branding and colours
- Flexible – connect LowPros together with long or short infill strips to extend cover length
- Compact – 1.2m x 0.8m cover fits easily in a small works' vehicle

LowPro Trench Cover 12x8 Specification
