

## CONCORD PEDESTRIAN BARRIER INSTALLATION GUIDE

The Concord Barrier is an innovative three-metre angled temporary barrier system used to secure spectator safety. The barrier also doubles up as an excellent space for company branding, wayfinding and marketing.

People to Install:

Equipment / Accessories Needed:

No accessories are required but branding and signage can be added.

1

Position the barrier along your perimeter line.

2

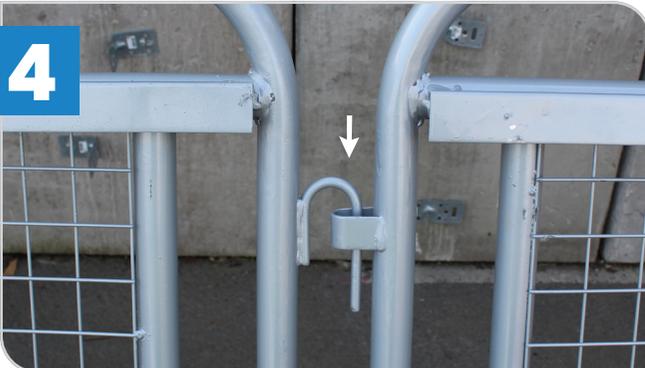

Place the feet of the barriers at the end of each barrier.

3

Insert the end of the barrier into the outside hole at the top of the foot.

4

As you position the fence panel in the foot, line up the hook on side of the panel with the loop on the fixed panel.

5

The barriers should line up and secure firmly in place. Ballast can be added for additional stability.

**Useful Tip:** An added benefit of this barrier is the ability to add signage or full panel branding.

Wear the appropriate PPE for this task.
