

## SSF 3.5M PEDESTRIAN BARRIERS

### Overview

Our 3.5m pedestrian barriers are ideal for events and low level perimeter security. They can have weighted or anti trip feet depending on their intended use and can be stacked easily. The benefit of the 3.5m barrier is that it covers more meterage than the smaller barriers which reduces installation time and therefor lowers the cost.

Safesite are very experienced in the events industry and offer and complete service from delivery and installation to dismantle and collection. Our team are well presented and extremely efficient which is imperative when working at an event.

Ideal for directing foot traffic

Easy to transport and install

Weighted and anti-trip feet
