

1.5m Concrete Barrier

SPECIFICATION SHEET

1.5m Concrete Barrier

Our 1.5m concrete barriers are a simple and cost-effective option for preventing unwanted vehicular access at your business or residential premises, and at a variety of outdoor events.

Available for purchase or hire, our 1.5 metre, ram-resistant concrete barrier blocks weigh more than a ton each, meaning they are near impossible to move without the use of specialised lifting equipment. Furthermore, these sturdy barriers seldom need replacing - they can be used repeatedly for many years, and for multiple applications (including safely counterbalancing loads on lorries and cranes). We also deliver 2.5m and 3m concrete barriers to all areas of the UK.

If desired, we can personalise your selected barriers with your company colours and/or emblem (additional fees apply).

1.5m Concrete Barrier Spec

Length	Depth	Height	Weight
1485mm	450mm	760mm	1100kg
