2 Piece Green Traffic Cone with Magenta Sleeve

Our 2 Piece Green Traffic Cones are designed work access entrance and exit points, helping to improve safety for drivers on roadworks and construction sites.

These specialist 1000mm high traffic cones feature a durable two-piece construction with a heavy-duty black ballast base for excellent stability in challenging weather conditions. The highly reflective magenta sleeve provides outstanding visibility in both daylight and low-light conditions, making them ideal for sites where clear hazard communication is essential.

Manufactured to meet the relevant UK standards for traffic management.. Green cones are typically used on roadworks to clearly mark site vehicle entrances and exits. They help drivers quickly identify access points, supporting safer and more efficient movement around the works.

High visibility magenta sleeve

2 Piece Green Traffic Cone with Magenta Sleeve Specification
