

LEGATO BLOCK INSTALLATION GUIDE

Legato concrete blocks can be used to manage vehicle and pedestrian access at your premises as well as being ideal for building custom storage bays, partition walls, security barriers and much more.

People to Install:

Equipment / Accessories Needed:

- Pin anchor
- Plant operation

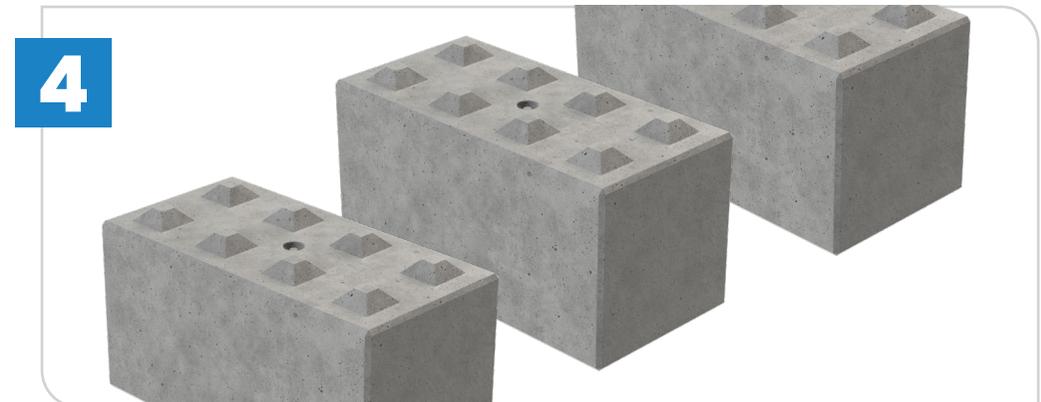

To lift the block you need to attach a pin anchor ring clutch, or combination ring clutch.

The ring head of the clutch has a locking bolt, which helps safely lock into plate anchors while the concrete panels are in the lifting process.

Connect the grab hook to the ring clutch and lift and move the concrete block into the required position.

Stack the blocks so that the faces are flush against each other.
