Traffic Separator Barrier

These traffic barriers are ideal for managing traffic around roadworks, construction sites and other temporary works.

Made from UV-stabilised HDPE, they are highly durable and designed to withstand outdoor conditions, providing long-lasting protection and reliable performance on site.

The Traffic Separator Barriers have been designed for quick and easy installation, helping you save time while maintaining a safe and well-managed work area. Each unit weighs just 5.5kg when empty and up to 40kg when filled, making them a practical and easy-to-handle solution for transporting and positioning around your site.

The barriers also feature integrated forklift slots, making them easier to stack, transport and manoeuvre with a forklift. For additional height, mesh panels can also be attached to the barriers, providing an extended level of protection and helping to further secure your site.

Key Features

- Rapid and simple installation
- Easy to assemble, stack, and transport
- Optional mesh panels for additional height with or without couplers
- Made from robust HDPE
- UV-stabilised
- Interchangeable sides
- Forklift handling compatible
- Pallet quantity 27
- Custom colours available
- Bespoke embossing available on request
