Battery Powered Bulkhead Light

SPECIFICATION SHEET

Battery Powered Bulkhead Light

Our battery hoarding lights have a specially designed bracket at the rear to enable easy installation onto the flat side of hoarding panels.

The lights can be supplied in either red or white, and are commonly used to warn motorists of hoarding and other hazards close to the road's edge. Each lamp features a selectable mode switch, allowing you to alternate between a constant illumination or flashing.

A built in daylight sensor turns the lamps off automatically during daylight hours to preserve battery life.

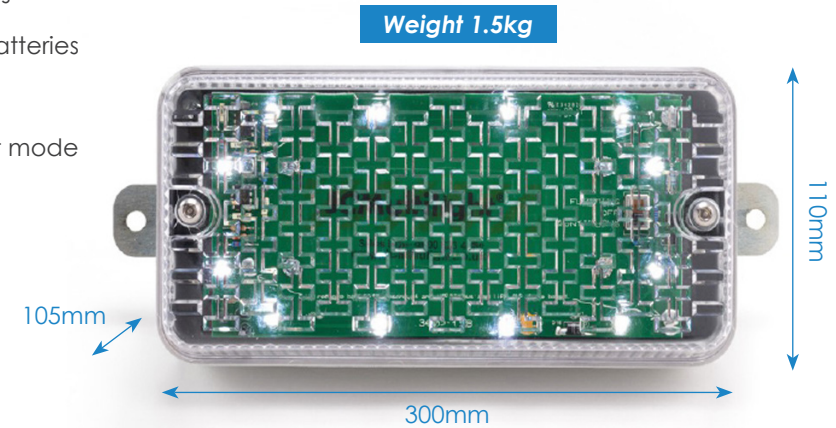

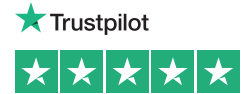

The light only requires four D-Cell batteries provide enough power for: 6 months of operation in flashing mode, and 3 months of operation in constant mode. Tamper resistant security bolts prevent unwanted "adjustments" of the units.

Battery Powered Bulkhead Light Spec

Length	Width	Height	Weight
300mm	105mm	110mm	1.5kg

Key Features

- Battery powered
- Available in red or white
- Light intensity: 1.00 Lux (red), 8.68 Lux (white)
- Additional fixing available for scaffolding & Heras fencing
- Tamper resistant security screws
- 4 x D type Duracell industrial batteries
- RoHS compliant
- Selectable flashing or constant mode
- Built in daylight sensor
