Police Barrier

The Police Barrier is an innovative light weight crowd control barrier used to secure spectator safety and is an ideal solution for events such as demonstrations, football matches, pop concerts and any other event where a high security solution is required.

This barrier is less likely to topple over than many comparable products due to the depth of its 705mm angled base, accompanied by the combined security of connecting to each neighbouring barrier via an easy to use interlocking system. It is particularly suitable for controlling the flow of people and heavy crowd surges.

Police Specification

Description	Size (mm)	Weight (kg)
PBS130550 - Police Barrier	H1065 x W1526 x D705	26

Key Features

- > Designed to withstand crowd surges
- > Base structure designed to prevent sliding
- > 30 can be stacked on just one stillage
- > Can be quickly installed and dismantled
- > Can be configured to create a number of high security zones

Police Barrier in Action

The images to the right clearly show the versatility of the Police barrier.

The barriers are made with a welded, galvanized tubular steel frame and fitted with a steel anti-climb mesh infill panel creating an attractive appearance. The unique footprint of the base is designed to prevent the barriers from sliding.

In addition to the rapid installation and dismantling process, the barrier can also be stacked and stored in units of thirty per stillage which can then be easily manoeuvred by a fork lift truck.

Police Barrier Stillage

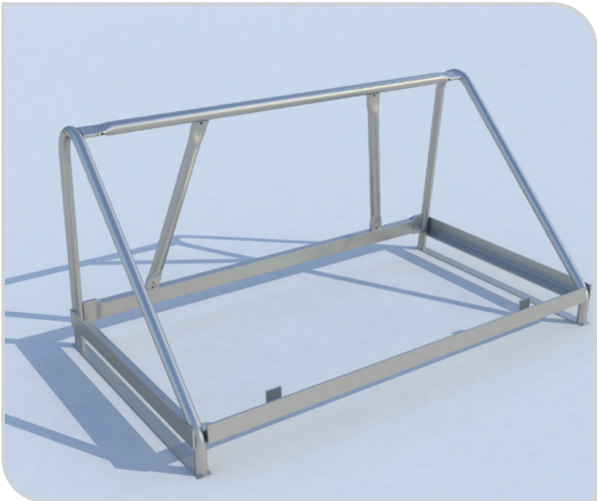

SafeSite’s WonderWall barrier system links with a separately moulded peg, which provides a secure fix and offers easy connection between barriers.

This system allows for runs of extra strength barriers to be readily erected, ensuring efficiency in emergencies or short-schedule situations. This peg linkage system also means that any dismantling and repositioning can also be achieved quickly.

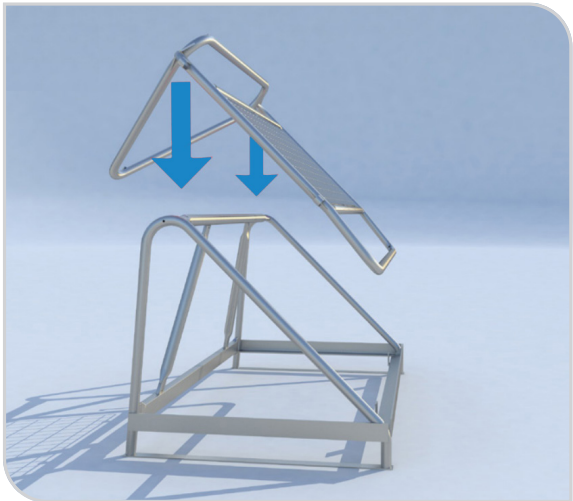

The peg linkage also makes WonderWall barriers compatible with other barrier systems, including the WonderDoor gates which can be easily connected using the door’s S-Clip system, to allow access points.
