Manta Unpainted Barrier

This version of the Manta barrier offers the same durable, long-lasting design as the original, but without the powder-coated finish.

Made from recyclable galvanised steel, it is built to withstand tough conditions and is suitable for repeated repositioning and reuse throughout the life of your project.

Available in the standard galvanised unpainted options, this model also offers a high-visibility red and white striped option. Each unit securely connects to the next using a removable steel pin, allowing you to create a continuous and adaptable barrier system tailored to your site requirements.

Hi-Vis Option

Connection Pin

Key Features

- Crash tested to T2 W7 levels, without the need for re-enforcement bars
- Wind tunnel classification of Class A/74mph
- Can be used with mesh fence and steel hoarding panels
- Stackable for easy transportation
- Anti-vandal design
- Accommodates 90° bends
- Option with Hi-Vis Striped version

Description

Size (mm)

Weight (kg)

MTS200030 – Manta Unpainted Barrier – Standard	H420 x W1500 x D500	48
MTS200020 – Manta Unpainted Barrier – Hi-Vis	H420x W1500 x D500	48

Manta Unpainted Barrier – Options

Manta Barrier
(Unpainted with High-Vis)

Manta Barrier
Unpainted Only

Important Information!

Manta Barriers Don't Need Connection Bars

The Manta Barrier still maintains its tested safety standards when also supporting either a 1.5m pedestrian fence or 3m temporary fence, this is due to the Manta Barriers innovative design and installation method which eliminates the need for a connection bar.

This marketing leading system not only saves time during installation, but also saves space when in transit. Regardless of whether your installation is standalone or requiring of a fence add-on, no connection bar will ever be required.

This approach to the system aids the streamlining of installation through both speed, and easy handling of the lightweight connection pin plate used to join the barriers.

Key Features

- No connection bar is ever required
- Maximises Installation times
- Connection is achieved by pin plate when using a standalone barrier
- Manta Barriers can also connect using the legs of the fencing add-ons to act as connection pins without reducing safety
- Connection Pin Plate is a lightweight, easy to handle size
- Crash tested to T2 W7 levels, inclusive of fence add-ons

Manta Barriers connected using Pin Plate

Manta Barriers connected using fence add-on bar extensions

Manta Barrier Crash Tested

The ASI achieved by the Manta Barrier is 0.2 and THIV 13, this results in an A rating for severity which is the lowest and best result achievable.

This is a report summary of the crash test conducted by Horiba Mira Ltd, describing the dynamic impact test of the Manta Barrier System to W7 of BS EN 1317:2010. The impact conditions of this test were met with total test mass of 1300 (± 65) kg at a speed of 82 ($-0 + 7\%$) km/h (50.9mph), at an angle of 15.7° ($+1.5, -1$) degrees to the line of the barrier traffic face and therefore satisfactory. The vehicle model used to undertake the test was a Ford Focus.

The correct installation of the test item was the responsibility of the client. The length of the barrier tested was 60m (including anchor terminals), the dynamic deflection was 1.6m and the working width was 2.2m. No part of the barrier penetrated the interior of the vehicle and no part of the barrier was ejected.

Crash Test Summary

- Best possible result for ASI & THIV assessment, achieving an A rating
- Passed W7 of BS EN 1317:2010 impact test
- Withstood 1300kg impact at 50.9mph from a 15.7° angle
- No reinforcement bar used or required
- Velocity and angle values were within tolerance limits
- The vehicle did not breach the device
- The vehicle did not roll over within the test area
- No part of the vehicle was detached

Initial point of impact

Degree of deflection at point of highest force

Manta Barrier Wind Tested

The Manta Barrier has been meticulously tested within an internationally renowned wind tunnel testing facility, during which the barrier system achieved two classification A passes and one classification B pass.

Three arrangements of the Manta barrier system have been tested, these include two adjoined Manta barriers without any add-ons, two adjoined Manta barriers with the lightweight pedestrian fence add-on, and two adjoined Manta barriers with the anti-climb mesh fence add-on. Each arrangement of the system achieved a high level of wind resistance, with the exact resistance figures detailed above the diagrams to the right.

Classification: A

Speed Limit Reached: 1

20km/h (33.3m/s)

Classification: A

Speed Limit Reached:

97km/h (26.9m/s)

Classification: B

Speed Limit Reached:

72km/h (20.0m/s)

Manta Barrier 1.5m Pedestrian Fence

The Manta Barrier Pedestrian fence is very lightweight, weighing only 5kg. Despite its light weight, the pedestrian fence extension increases the overall height of the barrier system to a substantial 1m.

This quick and easy to install extension provides the additional security often needed to protect vehicle drivers, workforce and pedestrians.

By using the pedestrian fence extension you have the reassurance of knowing the extra height achieved will reduce the risk of a passer-by perimeter breach.

1.5m Pedestrian Fence

In-Line Manta Pedestrian Gate

1.5m Pedestrian Fence Specification

Description	Size (mm)	Weight (kg)
MTS200450 – 1.5m Pedestrian Fence	H580 x W1463 x D38	6

Key Features

- Increases overall height to 1m
- Legs double up as connection pins
- Anti-climb mesh
- Quick and easy to install
- Provides protection to workforce and pedestrians
- Manufactured using galvanised steel
- Reduces the risk of the barrier perimeter being breached

Manta Unpainted Barrier Chapter 8 System

This enhanced version of the 1.5m pedestrian fence has high visibility and highly reflective red and white markings.

The additional high visibility markings ensure compliance to Chapter 8 requirements, the system is also compliant to road traffic standards BSEN8442 & BSEN12899-1.

Our Manta Barrier Chapter 8 System is strong enough to remain stable in adverse weather conditions due to the substantial 42kg Manta Barrier base unit, this is significant when you consider many Chapter 8 barriers weigh less than 15kg.

1.5m Chapter 8 Pedestrian Fence

Row of Manta Barriers with Chapter 8 Pedestrian Fence

1.5m Chapter 8 Pedestrian Fence Specification

Description	Size (mm)	Weight (kg)
MTS200500 - 1.5m Pedestrian Fence	H580 x W1463 x D38	6

Key Features

- High visibility
- Legs double up as connection pins
- Anti-climb mesh
- Chapter 8 compliant
- Manufactured using galvanised steel
- Provides protection to workforce and pedestrians
- Compliant to requirements BSEN8442 & BSEN12899-1
- Increases overall height to 1m

Manta Barrier 3m Fence

In addition to its stand alone benefits, the Manta Barrier can accommodate one of the lightest 3m anti-climb fence panels on the market, allowing for greater ease when manually handling.

The add-on panel massively increases the overall height to a lofty 2m. This quick and easy to install extension provides the reassurance of knowing the chances of a perimeter breach are dramatically reduced.

1.5m Pedestrian Fence

Row of Manta Barriers with 3m Fencing

Key Features

- Increases overall height to 2m
- Legs double up as connection pins
- Anti-climb mesh
- Quick and easy to install
- Manufactured using galvanised steel
- Provides protection to workforce and pedestrians
- Compliant to requirements BSEN8442 & BSEN12899-1
- Drastically Reduces the risk of the barrier perimeter being breached

3m Fence Specification

Description	Size (mm)	Weight (kg)
MTS200400 – 3m Fence	H1500 x W2968 x D38	15

Manta Unpainted Barrier Corner Sections

Manta Barrier Corner Sections give the ability to rotate units at 90° to accommodate right angles and bends.

Common applications include defining pedestrian walkways and vehicle access, for example, to create a pit lane on a construction site or anywhere that requires the demarcation of vehicle traffic and footfall for pedestrian, visitor and workforce safety.

Manta Barrier 90° with fence

Manta Barrier Type 1 Unit Hi-Vis

Manta Unpainted Barrier Corners Specification

Description	Size (mm)	Weight (kg)
MTS200096 – Type 1 Unpainted	H420 x W1570 x D500	43
MTS200106 – Type 2 Unpainted	H420 x W1505 x D500	43
MTS200098 – Type 1 Hi-Vis Unpainted	H420 x W1570 x D500	43
MTS200108 – Type 2 Hi-Vis Unpainted	H420 x W1505 x D500	43

Key Features

- Easy connection brackets
- 45° angled body to allow for 90° angle when joined
- Fence add-ons can still be used with angled sections
- Perfect for forming pedestrian walkways and construction site access areas
- Identification markers for easy install

Manta Unpainted Barrier End Sections

A run of Manta Barriers can be neatly finished off by using our specially designed end section unit, the finishing section is available for both male and female connections and ensures there are no unwanted edges that could potentially be hazardous.

The end section maintains the height of the standard unit and has the advantage of also being compatible with all of the available fencing add-ons. Other benefits include the end sections ability to act as a cushion absorbing impact and in turn protecting connection parts should the Manta barrier be impacted.

In addition the end section allows for a nice tidy finish to the end of a Manta Barrier run, it also has benefits due to its octagonal shape which minimises movement when in transit if stacked on its side, compared to round competitor units which are prone to excessive movement when in transit.

Male End Section

Female End Section

Manta Unpainted Barrier End Sections Specification

Description	Size (mm)	Weight (kg)
MTS200128 – Male Unpainted	H500 x W660 x D490	17
MTS200188 – Female Unpainted	H500 x W580 x D490	19

Installation parts

Manta Barrier – Measurements in mm

Please see below pictures and quantities of additional parts you will receive with each Manta Barrier. The parts below are an essential safety requirement when installing the Manta correctly.

Standard part

1 Qty 1: Connecting pin

Product ID	MTS200300
Height (mm)	380
Width (mm)	140
Depth (mm)	72
Weight (kg)	1.2

Accessory

2 Qty 1: 1.5m Pedestrian Fences

Product ID	MTS200450 & MTS200500 (Hi-Vis)
Height (mm)	580
Width (mm)	1463
Depth (mm)	38
Weight (kg)	6

Accessory

3 Qty 1: 3m Fence – 1 panel per 2 Barriers (1 Connection Pin Required)

Product ID	MTS200400
Height (mm)	1580
Width (mm)	2968
Depth (mm)	38
Weight (kg)	15

Accessory

4 Qty 1: Standard Coupler (1 per 1.5m pedestrian fence, 2 per 3m fence)

Product ID	TFS100500
Height (mm)	50
Width (mm)	130
Depth (mm)	52
Weight (kg)	0.2

1

Please be aware the Manta Barriers measure 1.5m in length and will therefore slightly overhang the 1.2m pallet they are to be placed onto, this overhang is acceptable within these guidelines.

Place two Manta Barriers side by side so the inner edge of each foot touches the opposing barrier. Each barrier should align at both ends.

When together the barriers should take a central placement on top of the pallet.

4

Carefully place a further two Manta Barriers side by side onto the previously placed pallet wood so that the inner edge of each foot touches the opposing barrier, each barrier should align top and side with the stacked barriers below.

When together both the barriers should take a central placement in relation to the bottom barriers and pallet.

2

Insert one Manta Barrier upside down to fit inside the empty void that was created from the placement of the previous two barriers.

The feet of this barrier should be evenly supported by the heads of the previous two barriers and also align with the ends of the previous two barriers.

The exposed base of this barrier must be even and level in readiness for the next processes.

5

Now one last barrier must be carefully placed on top of the last two barriers to fit inside the empty void that was created.

The feet of this barrier should be evenly supported by the heads of the previous two barriers, and also align with the ends of the previous two barriers.

The exposed base of this barrier must be even and level in readiness for the next processes.

3

Two additional lengths of pallet wood must now be placed onto the flat base of the previously positioned barrier.

These lengths of wood should be placed approximately 15cm within each end of the three stacked barriers, and be placed in such a way the centre of the wood is central to the base of the third barrier and parallel to the pallet beneath.

6

Now a check must be carried out to ensure all of the stacked barriers are evenly balanced, stable and level.

Once this check is successfully completed the whole stack must be secured by heavy duty polypropylene pallet strapping to run from the underside of the pallets top level, all the way around the six stacked barriers. Two rings of strapping must be applied approximately one quarter distance from each end of the stacked barriers.
