FACILITIES

Multi-use Mobile Safety Station

Ensure your construction site remains compliant and safe with the Multi-use Mobile Safety Station, designed to be a highly visible and mobile display point for Health & Safety regulations, essential site information, and safety equipment.

Ideal for construction sites, warehouses, and industrial environments, this unit offers an organized, accessible solution for safety and compliance needs.

The Multi-use Mobile Safety Station is a reliable way to manage site safety and essential equipment in high-traffic areas. It ensures that vital health, safety, and legal notices are clearly visible to all workers. The top section includes a noticeboard with a clear, hinged plastic panel for easy access to key information. Below, a spacious shelf holds larger safety items like spill kits, fire extinguishers, or first aid supplies. An optional viewing panel for the lower section adds flexibility for display or storage of critical items.

Other colours available on request
