SafeMat Ground Protection

Our heavy duty, easy to handle SafeMat system provides temporary access and ground protection. It is ideal for soft or sensitive ground. SafeMats have a 'non-slip' surface which substantially improves the grip and reduces sideways slippage, even in the most challenging weather or ground conditions.

The mats are all manufactured from 100% recycled high density polyethylene (HDPE) and are weight tested to a maximum load of 120 tonnes (depending on ground conditions).

The SafeMat can provide access for heavy plant machinery, helps vehicles avoid becoming bogged down and is also the perfect solution for events such as concerts and festivals to ensure a safe walking area to improve pedestrian and crowd safety.

SafeMats can be customised with a company logo or telephone number or produced in corporate colours – subject to minimum order quantity.

Options to connect SafeMats with the 2-way or 4-way connectors

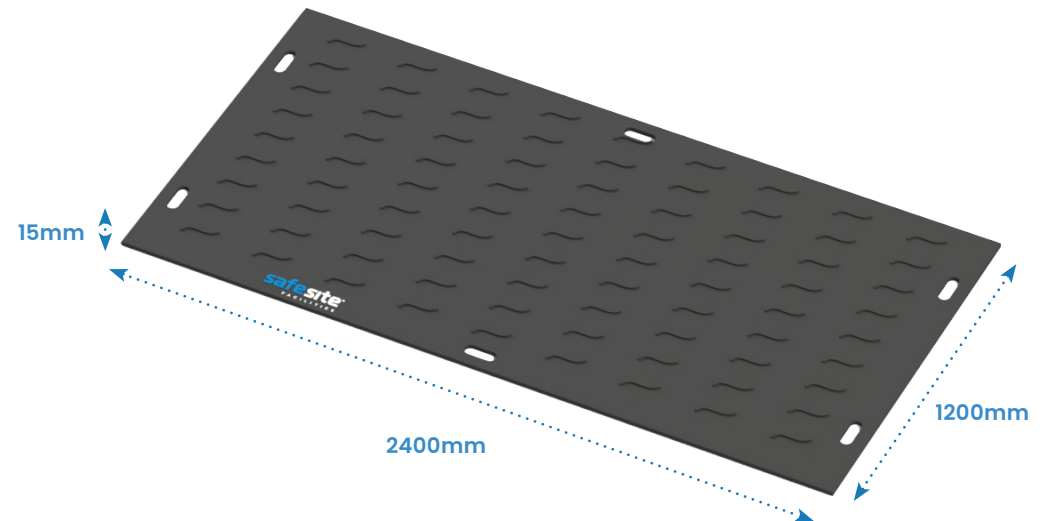

Rapid install covering large areas

Description	Size (mm)	Weight (kg)
GPS230300 – SafeMat Ground Protection	H15 x W2400 x D1200	45

Key Features

- Can be used both for pedestrians and vehicles – with 2 sides
- Reverse side ideal for lighter vehicles such as fork lift trucks
- Avoids vehicles becoming bogged down
- Avoids health and safety issues
- Low transportation and handling costs
- Supports weights of up to 120 tonnes
- Made from high density polyethylene (HDPE)
- Option to use connectors to link multiple SafeMats together

SafeMat Ground Protection

The mats are ideal for both short and long term projects providing access for both heavy plant and machinery, whilst also providing stability for work personnel and the public.

This product is also the perfect solution for events such as concerts and festivals to ensure pedestrian and crowd safety.

The SafeMat has strategically positioned hand holes which make it extremely easy to off-load from trucks or pallets.

Their lightweight but heavy duty nature, also reduces transport costs, as well as enabling quick and easy installation by two operatives.

Technical Details

- SafeMats have a highly engineered, 'non-slip' surface, this substantially improves the grip and reduces side way slippage, even in the most challenging weather or ground conditions. Hand holes for easy handling and rapid installation
- SafeMats can be connected together using a range of our 2-way and 4-way connectors options, please see view on the next page.
- SafeMats can be customised with either a company logo and telephone number or even produced in corporate colours – subject to minimum order quantity.

SafeMat Connection Options

Here are connection options for your SafeMat Ground Protection

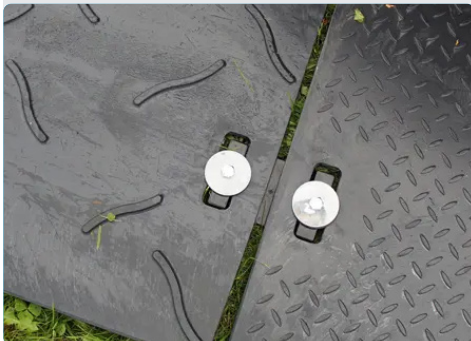

GPS230320

SafeMat Universal Hand Hold Connector

Simply align the mats over the hand hold cutouts and secure from the top using bolts and washers.

- Connects to 2 corner SafeMats
- Made from 100% Recycled High Density Polyethylene (HDPE)
- 100% recyclable

GPS230326

SafeMat Universal Corner Connector 2-Way

Simply align the mats corner holes over the connector and secure from the top using bolts and washers.

- Connects to 2 corner SafeMats
- Made from 100% Recycled High Density Polyethylene (HDPE)
- 100% recyclable

GPS230327

SafeMat Universal Corner Connector 4-Way

Simply align the mats corner holes over the connector and secure from the top using bolts and washers.

- Connects to 4 corner SafeMats
- Made from 100% Recycled High Density Polyethylene (HDPE)
- 100% recyclable

SafeMat Connection Options

Here are connection options for your SafeMat Ground Protection

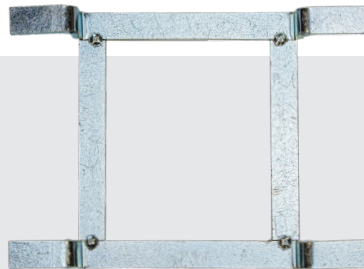

GPS230322

SafeMat All Metal Low Profile Corner Connector 2-Way

Simply align the mats over the hole corners and secure and slot in.

- Connects to 2 corner SafeMats
- Made from galvanised steel

GPS230324

SafeMat All Metal Corner Connector 4-Way

Simply align the mats over the hole corners and secure.

- Connects to 4 corner SafeMats
- Made from galvanised steel
