Powerbrush Forklift Sweeper

A plug-and-play power brush sweeper that attaches to forklift forks, transforming your vehicle into a mobile site-cleaning machine.

This forklift sweeper attachment features a simple hydraulic system with a single one-way valve for smooth and reliable operation, along with a durable hopper design that efficiently collects dirt, dust, and site waste during sweeping. Secure heel pins keep the unit firmly fixed to the forklift forks, while the three-wheel stability system enables it to follow uneven ground and maintain consistent cleaning performance.

For added convenience, onboard storage is provided for spare fork retaining pins when the Power Brush is not in use. The unit also includes a high-capacity 250L water tank fitted with a quick-release plug for fast emptying, as well as a tethered tank cap to prevent loss.

You can choose between the Standard model with drip-fed water or the Pressurised Water Spray model, which is ideal for especially dusty sites. Both versions can also be fitted with an optional kerb brush, making them perfect for cleaning along kerbs and gullies.

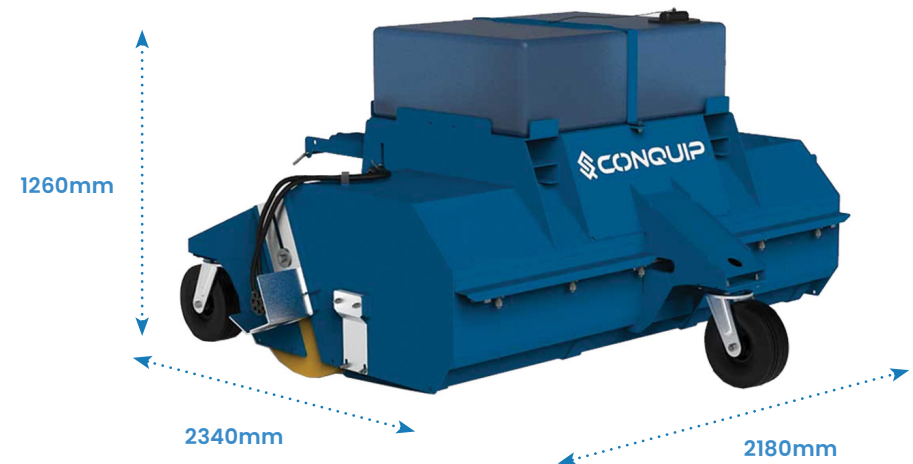

Powerbrush Sweeper in use

Powerbrush Sweeper with additional kerb brush attachment
