

Palisade Fencing

SPECIFICATION SHEET

Palisade Fencing

When security is paramount, numerous sites will look to palisade fencing to provide a formidable barrier against vandals and thieves that are looking to gain access.

Our high-security palisade fence panels are constructed of the 'W' section palisade, secured with 8mm shear cone security bolts. Constructed from steel uprights with open slots in between, these slots allow the wind to pass through, which provides a more durable barrier opposed to hoarding.

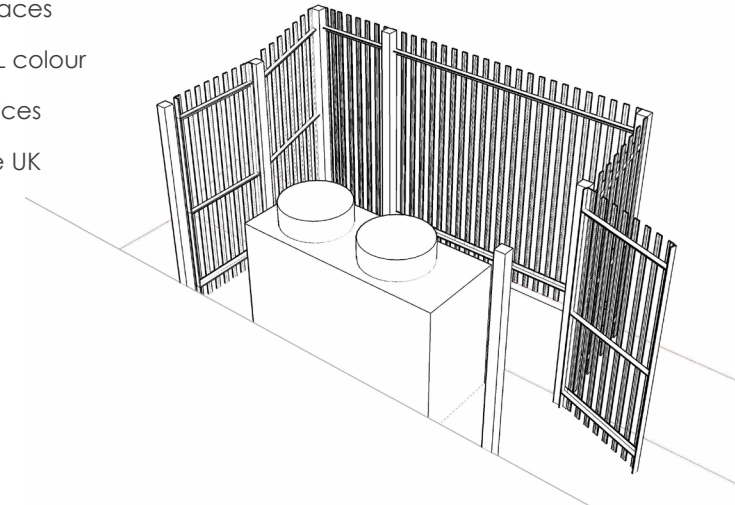

Available in a range of heights and finishes, which includes galvanised and can be powder coated in various colours.

Fencing is available in either 'D' or 'W' profile and the fencing is ideal for uneven ground, as it can be installed to match the surface level but retain the same level at the top.

Key Features

- Heights from 1.2m to 3m but other sizes can be manufactured to suit
- Posts can be supplied for in-ground and bolt-down applications
- Pales can be spiked or rounded depending on security needs
- Ideal for installation on uneven ground surfaces
- Fencing can be powder coated in any RAL colour
- Compatible with additional anti-climb devices
- Supply and Installation Available across the UK
