Supagrip Wheelchair Ramp

The Supagrip Safekerb is an upgraded version of the original Safekerb, designed to provide improved stability and a higher load capacity for everyday access needs. Featuring an enhanced rubberised edge for superior grip on kerbs and surfaces, it helps reduce movement underfoot and delivers added confidence for users.

The Supagrip Safekerb supports loads up to 350kg while weighing only 10kg, making it a lightweight yet durable access solution. Featuring a rubberised edge for improved grip and reduced slipping, it also includes a slip-resistant, high-visibility surface for added safety. Suitable for kerb heights between 60mm and 160mm, the ramp is stackable for easy transport and storage, manufactured from 100% recyclable materials, and designed with a flexible edge that allows installation without bolts in most applications.

Key Features

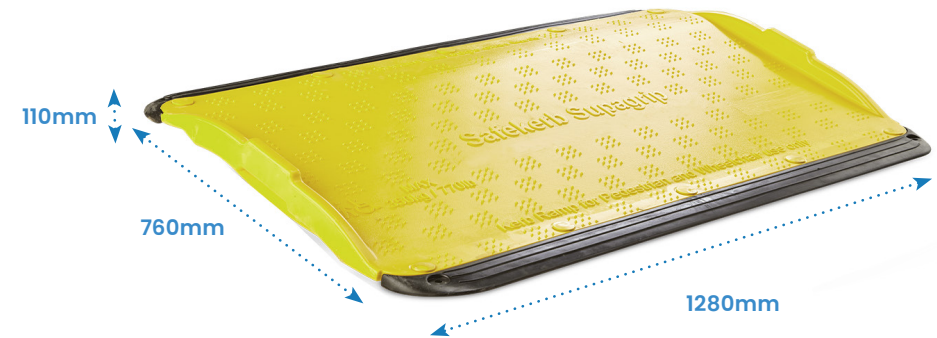

- 100% recyclable & made from recycled materials
- Non-slip & high visibility design
- Can be safely used on kerbs between 60mm and 160mm
- Rubberised edge for extra grip
- Supports mobility vehicles and foot traffic up to 350kg

Suitable for use with mobility scooters over the Supagrip wheelchair ramp.
