## LowPro Trench Cover 11x11

They are suitable for use in pedestrian and residential areas, footpaths and driveways and allow safe pedestrian movement while work is ongoing.

Trench covers are made from plastic, but unlike GRP road plates, they are a single unit and not part of a linked modular system. Unlike their market contemporaries, many trench covers can be lifted into place and installed by one person. One notable feature of the Safe Cover is its weight-bearing capacity. It can support vehicles weighing up to 1.6 tonnes, which is quite impressive considering its compact size.

Additionally, it can effectively cover gaps or trenches up to 700mm wide, ensuring a safe and level surface for pedestrians and vehicles to pass over. The high visibility 11/11 Safe Cover is a practical solution for creating temporary safe pathways and filling the void across a variety of settings such as construction sites, roadworks, or any other situation where a temporary cover is needed.
