4m Concrete Barrier

When insurance companies request a site to be blocked by a large immovable barrier – our huge, 4m concrete blocks are the answer.

These concrete barriers need to be specially delivered and installed onsite with a rigid lorry and grab crane. The absence of lift eyes and slots means that they are immovable without specialist equipment. These are suitable for large open sites where a short- long term perimeter solution is required such as car parks, farm and highway land. Once on site, these 4m immovable barriers provide instant security and peace of mind.

Key Features

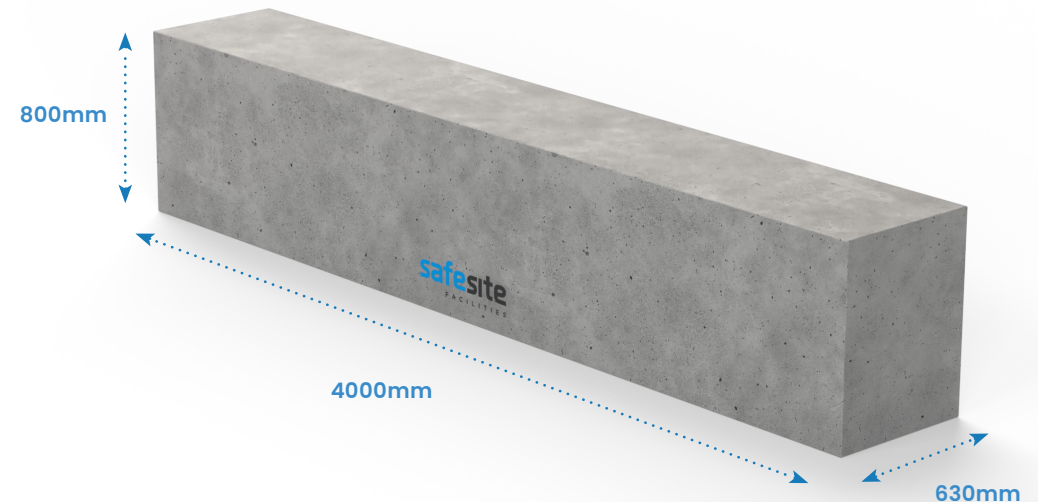

- Size and weight popular with insurance companies
- One of the largest reinforced concrete barriers in the UK
- 4.75 tonne weight
- Reinforced with a high tensile steel rebar
- British manufactured
- No channels or lifting eyes for unauthorised movement
- Barriers can be positioned alone or side by side in continuous lines
