Boot Wash Station

A compact, all-in-one cleaning station that allows personnel to quickly wash and sanitise footwear as they move on and off-site.

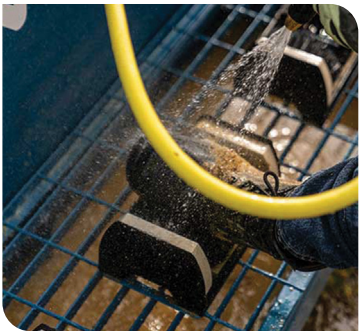

Designed to minimise the spread of mud, debris, and contaminants, the Single Bay unit is ideal for smaller projects or tight spaces. For higher capacity, the Triple Bay Boot Wash offers three adjoining wash sections for busier sites, with the option to link two stations for an extended wash area that reduces queues and downtime.

The raised drainage point allows contaminated waste to be pumped out safely rather than draining into the ground. An integrated water feed with compression fittings supports up to three spray guns, with holders to keep hoses clear of the ground. Each unit features removable anti-slip grating for safe footing and effective drainage.

Supplied with durable spray guns and brushes, with replacements available if required, the system is built for long-term reliability in harsh environments.

Key Features

- Supplied with high quality spray guns and brush for longevity and harsh environments
- Robust steel build, made to handle tough site conditions
- Quick and safe cleaning
- Removable anti-slip grating offers secure footing and efficient drainage into the sump below
- Prevents mud from entering clean zones and creating slip hazards
- Forklift pockets for easy manoeuvre around site
- Available as a Single Bay or Triple Bay
- Connect two stations for an extended wash station
- Replacement spray guns and brushes available on request
- Lightweight unit that can be flat-packed for ease of transportation
